Project Description

Are you a natural-born storyteller? Do you enjoy writing compelling content and helping create visuals that really grab viewers? If so, then we're looking for you! In this project, you'll collaborate closely with graphic designers at the U.S. Geological Survey's Science Publishing Network to create a series of information products about the highest priority projects at the Nation's premier earth science agency. We're talking 3D mapping, man-made earthquakes, finding the natural resources that fuel our economy, and safeguarding the public on our public lands. Under our guidance, you'll be able to bring your vision of our science to reality, where we'll feature it on our homepage and promote it via our social media channels.

Desired Skills Interests

Additional Information

The U.S. Geological Survey, as the nation's premier Earth science agency, conducts objective research to help

inform policy makers, resource managers, and the American people. We're part of the Department of the Interior and we work with land managers, States, cities, Tribes, and everyone in between. Our work spans all 50 states and stretches across the globe, so if there's an aspect of earth science you like, we probably do it.
